

CIMMS Team at the Storm Prediction Center

The Storm Prediction Center (SPC) is part of the National Weather Service (NWS) and the National Centers for Environmental Prediction. Our mission is to provide timely and accurate forecasts and watches for severe thunderstorms and tornadoes over the contiguous United States. The SPC also monitors hazardous winter weather and fire weather events across the U.S. and issues specific products for those hazards.

CIMMS researchers are housed within the SPC's Science and Support Branch. CIMMS personnel conduct a wide range of activities that contribute to the SPC's mission, including:

- 1.) Collaborating with other parts of NOAA and the NWS (and other federal agencies) to ensure that our forecasters have access to the latest information and technologies from across the government and that our forecasts are serving the needs of our governmental partners;
- 2.) Engaging in research projects to improve SPC's operational forecasts, by improving current forecast guidance or developing new types of forecast guidance; and
- 3.) Supporting critical SPC activities, including forecaster training, the Hazardous Weather Testbed, forecast verification, and development of new software.
